

Wide Belt Sander

This machine is used to thickness wood composite materials (Homasote, MDF, Particle Board) and to finish sand solid wood.

This machine is usually fitted with a very coarse abrasive intended to thickness sand wood composites, if you need to finish sand something please ask a shop technician for assistance in changing the abrasive.

Single workpieces must be at least 12" long.

Turn hand wheel to adjust the conveyor belt height to the thickness of your stock (thickness indicator on left side of conveyor table).

Start on the abrasive belt with the green button.

Start the conveyor belt with yellow button and set to the desired speed with adjustment dial.

Set stock onto conveyor belt and feed into machine.

This machine is not designed to remove more than 1/16" per pass. Never adjust the handwheel more than 1/2-turn per pass - damage to the machine will result!!

Hit both red buttons to stop conveyor and abrasive belt before stepping away from the machine.
